

CNC NAILING TABLE

The nailing table allows for the production of a wide variety of pallets, from small dimensions to special sizes, offering great manufacturing flexibility with minimal changeover times.

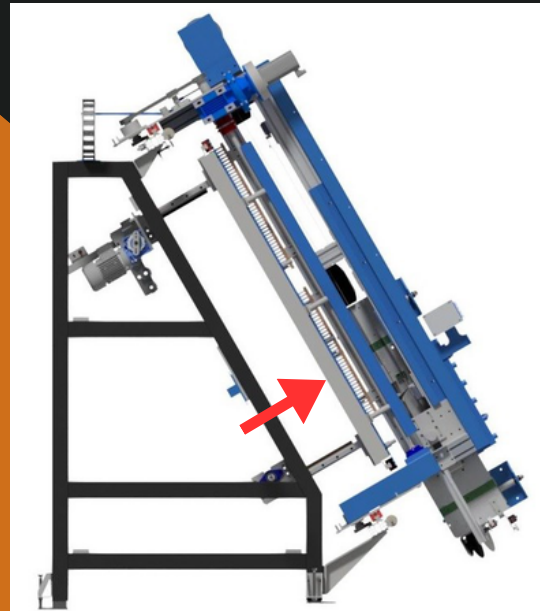

CUSTOM TEMPLATE COMPATIBILITY

The flat base allows for the installation of custom templates, as long as they are within the reach of the Computer Numerical Control (CNC), providing a tailor-made solution for every customer.

HIGH PRODUCTIVITY AND EFFICIENCY

- Automatic height adjustment, quickly adapting to different pallet sizes.
- Low energy consumption thanks to efficient motors.
- Elimination of downtime when changing models.
- Enhanced speed and accuracy through the use of servo motors.
- Digital tablet with a user-friendly interface, allowing very easy programming for new nailing formats.

FEATURES AND CUSTOMIZATION

- The table length is adjustable according to customer needs.
- The CNC system features an intuitive interface, allowing operators to simply position the boards and press a button to start the process.
- Bases manufactured according to the specifications of the nailing guns from the manufacturer of your choice.
- Possibility of integrating a robotic arm for handling the finished pallet, enabling the integration of fully automated corner cutting and stacking stations.
- Possibility of manufacturing templates according to the most commonly produced pallet formats.
- Selection of the table material according to needs.
